

Cortex™ -M4 Technical Reference Manual

ARM DDI 0439B

Errata 01

This Errata document gives corrections and additions to the Cortex-M4 Technical Reference Manual (ARM DDI 0439B).

The number of cycles for the MUL and MLA instructions in Table 3-1 page 3-4 are incorrect. Each instruction takes one cycle to execute, not two cycles.

Table 3-1 Cortex-M4 instruction set summary lists all the correct cycle timings.

- a. Division operations use early termination to minimize the number of cycles required based on the number of leading ones and zeroes in the input operands.
- b. Neighboring load and store single instructions can pipeline their address and data phases. This enables these instructions to complete in a single execution cycle.
- c. Conditional branch completes in a single cycle if the branch is not taken.
- d. An IT instruction can be folded onto a preceding 16-bit Thumb instruction, enabling execution in zero cycles.
